ABOUT US

At **CAVALIER LIVESTOCK EQUIPMENT**, we are proud to offer high-quality cattle yard and livestock management solutions, designed to meet the needs of every operation.

Our yards are available in three formats:

- **Portable Yards:** Flexible and easy to expand, increase the size, adjust the layout, or add extra components as needed. Ideal for operations on the move or seasonal use.
- **Semi-Permanent Yards:** A hybrid option offers more stability than portable yards while maintaining flexibility for future adjustments.
- **Permanent Yards:** Built for maximum durability and efficiency, designed for long-term livestock management with fully engineered structures.

Our experienced team will work with you to deliver yards that are practical, efficient, and built to last, with features that promote low-stress handling

Whether you're after a fully relocatable solution or a permanent fixture for your property, Cavalier Livestock Equipment has the right option for you.

Talk to us today about finding the best yard solution for your operation.

WHY BUY A CAV LIVESTOCK YARD SYSTEM?

"Finished constructing our heavy duty portable yards from Cav Livestock Equipment and we're very happy with how they turned out, they are much bigger than we expected ... great value for money! We weighed 220 head this week and it was great to finally have the right handling equipment to undertake this task. The yards worked well – especially the curved race! Thanks very much Cavalier."

Dave & Rowie Gurner "Booroondoo North" Moonie QLD

FORCING YARDS

The Cavalier Safety Forces have been developed to allow for smooth and direct race movement keeping the operator and cattle separated in a high pressure area. Cavalier Safety Forces are designed to assist with reducing cattle bruising and creating a stress free working environment on both operator and livestock.

STARTING FROM
\$5,383

- ✓ Self-activating locking system
- ✓ Can be purchased in either 90 or 180 degree systems
- ✓ Outside walkway can be added as an optional extra
- ✓ Manufactured from high quality Australian Steel.

CURVED RACES

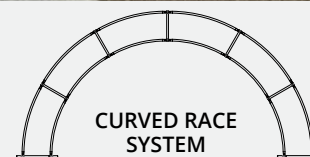

Curved race panels trick cattle to thinking they are moving in a circle, back to where they came from. This keeps them moving forward and minimises baulking. "Cattle just won't go in if it looks like a dead end. A curved race works because cattle have a tendency to go back where they came from", reference Temple Grandin.

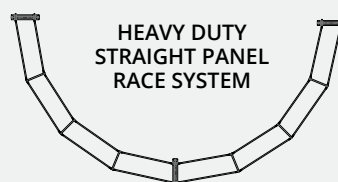

The advantages of implementing a curved race:

- ✓ Steady Movement: Cattle flow more smoothly along the curved fenceline. Unlike in a straight race, where cattle may move forward quickly, balk, and then move backward, a curved race encourages steady forward movement.
- ✓ Anti-Backing Effect: The natural curvature of the race discourages cattle from backing up. This reduces congestion and ensures a continuous flow.
- ✓ Self-Feeding: When the inside panelling of the curved race is open, cattle tend to move through it without hesitation.

STARTING FROM
\$9,021

CURVED RACE
SYSTEM

HEAVY DUTY
STRAIGHT PANEL
RACE SYSTEM

STARTING FROM
\$6,979

CURVED RACES & FORCE SYSTEM

This circular design of this processing system ensures operational efficiency and safety. Implementation of this system encourages:

- The reduction of injury risk in what is considered a hazardous section of the cattle yards
- Facilitates smooth and natural movement of cattle
- Improved animal welfare with this system as it minimises animal stress.

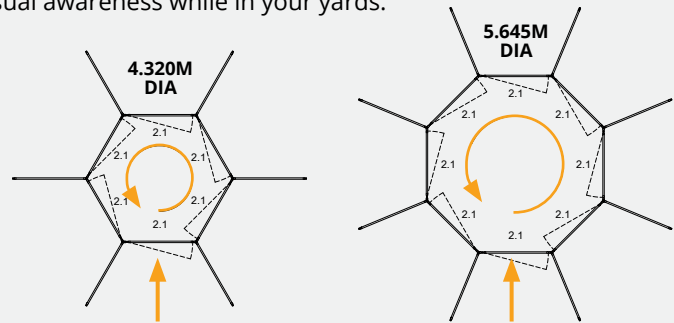

STARTING FROM
\$21,456

POUND DRAFTS

The Cavalier range of drafting pounds are designed with operator safety in forefront of mind when working with cattle in a high pressure area. Cavalier pounds make drafting your cattle simple with the platform option keeping the operator outside the working area and above your cattle for great visual awareness while in your yards.

- ✓ Permanent and portable options available 7 way draft is standard but can be customised to suit your operation
- ✓ Heavy Duty construction built from high quality Australian Steel
- ✓ Heavy Duty gates, hinges and latches for peace of mind
- ✓ Can be incorporated into most yard designs.

RACE DRAFTING

Cavalier Race Drafting systems can be supplied to suit any application and producer's needs. Race draft systems can be either portable or supplied as a fixed unit from a basic 3 way option to 5 way draft.

- ✓ Gates move inwards only for drafting creating a safe working environment
- ✓ Can be supplied in a manual or pneumatic operation
- ✓ Optional sheeted blind panels for improved flow
- ✓ Manufactured from high quality Australian Steel.

3 WAY DRAFTING MODULES

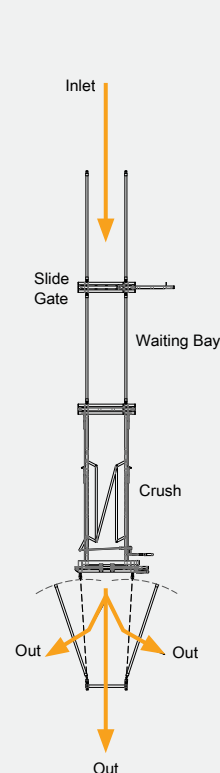

STARTING FROM
\$3,209

5 WAY DRAFTING MODULES

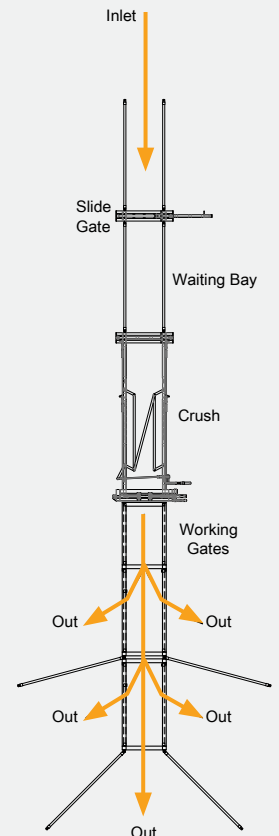

STARTING FROM
\$6,982

3 WAY DRAFT

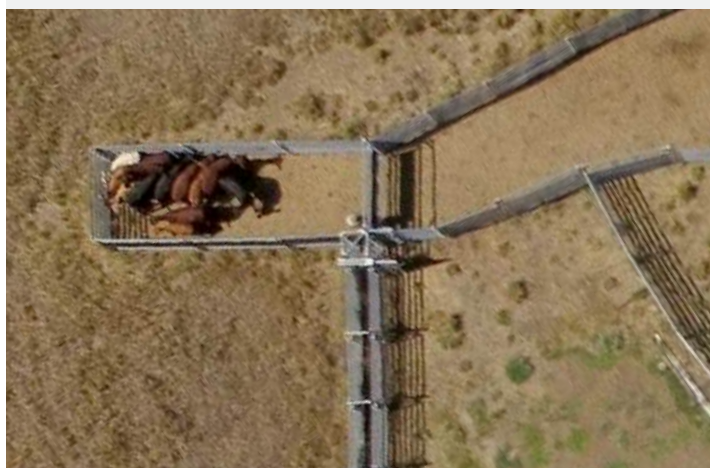

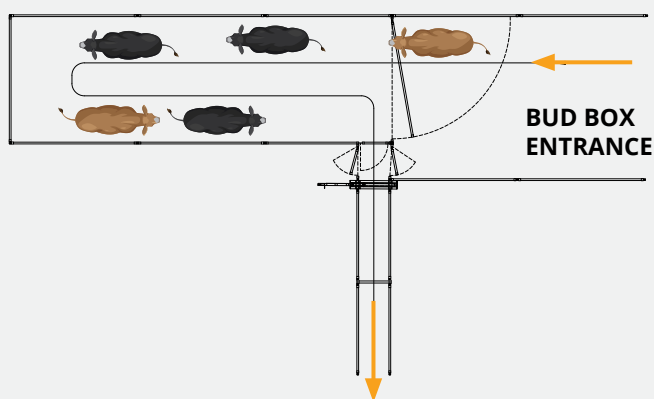

5 WAY DRAFT

BUD BOX SYSTEM

The Cavalier “Bud Box” facility is a low stress livestock handling facility where you can move cattle quietly and quickly simply by positioning yourself in the correct position. The “Bud Box” is designed not as a holding pen but should be used as a flow through part of your yards.

- ✓ Improves continuous flow into race section of cattle yards
- ✓ Optional length “Bud Boxes” available
- ✓ Fully sheeted for better flow control
- ✓ Can be incorporated into most yard designs
- ✓ Manufactured from high quality Australian made steel.

TIPS & TRICKS FOR YARD DESIGN

1. Saving Money with Yard Designs can be achieved with a combination of light and heavy duty panels to achieve cost efficiencies when building the new cattle yard without sacrificing safety not the ability to process cattle quickly and efficiently.
2. Smaller yard systems are ideally suited for small hobby farmers handling needs. Regardless of the perception that “my cattle are very quiet” it is very important to provide safe and efficient cattle yard systems for any cattle handling and management. Safe working yards designs should cover the inclusion of: round yard forcing, round holding yard for easy movement of cattle and drafting gates at the front of crush for stress free husbandry practice and cattle management.
3. A properly designed and well built system is key to good handling and reducing stress on your cattle. There are some building basics and details that animal behaviourists have identified as necessary for designs that minimise stress in cattle. Top on this list is a handling system that uses curves. NOTE: The circular yard design exploits the natural circling and “Follow the leader” habits of cattle, that is, induced baulking.
4. Larger yard design using simple design heavy duty components to provide the disconcerting cattle grazer with a great and very efficient yard system. NOTE: The inclusion of Drafting Gates allows quick and easy access to cattle’s head and to both sides of the beast and also cattle remain in structure when gate is open during disruptions.
5. Safety is paramount when handling cattle and all yard designs should consider well-being features including, Drafting Pound with Platform, Round Forcing Yard, Race Drafting and/or Budbox to provide excellent qualities in safety and efficiency! According to Dr Temple Grandin, incorporate a forcing pen in your design and use as a ‘passing through’ pen so cattle can move straight through onto the truck and never fill the forcing pen more than half full.
6. Cattle Yard Placement: Construct yards in a central position that provides all weather access and is accessible to all parts of the property.

SMALL YARD DESIGN

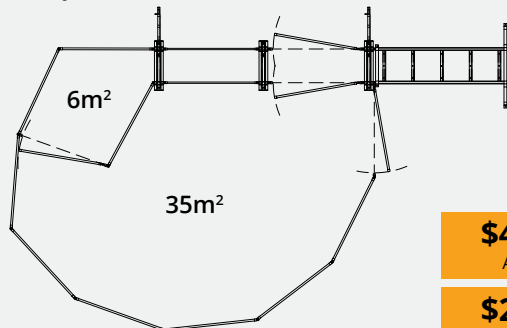

CAVALIER
LIVESTOCK
EQUIPMENT

5-10 HEAD YARD

FEATURES: Very economical yard system designed with Headbale option only.

BENEFITS: Entry level yard system designed for Hobby Farmers on small properties with very small herds.

\$4,350

AUSSIE

\$2,952

BUDGET

PRICE INCLUDES: Premier Panels and Gate in Frames + Slide Gates.

LENGTH 7.6m
